

KraneShares CSI China Internet ETF

KWEB is a China ETF that tracks the CSI Overseas China Internet Index, which consists of China based companies whose primary business or businesses are focused on internet and internet-related technology. The Index is free float market capitalization weighted and includes securities traded on the Hong Kong Stock Exchange, NASDAQ, or NYSE.

Why KWEB?

- **China Tech Innovators:** Exposure to Chinese internet companies that provide similar services as Google, Meta, X, Amazon, etc.
- **Middle Class Growth:** Holds companies aligned with domestic consumption trends among China's growing middle class.
- **Policy Support:** China's 15th Five-Year Plan (2026-2030) emphasizes "technological self-reliance" which we believe could create long-term growth opportunities for Chinese technology companies¹.
- **China AI Exposure:** KWEB holds prominent companies in China's Artificial Intelligence (AI) development, including Alibaba, Baidu, and more.

Capturing China's AI Innovation:

- KWEB gives investors exposure to many of the companies leading China's AI race. Alibaba, Baidu, and Tencent each operate a top-ten global AI application by monthly active users as of January 2026².
- China's AI industry is positioned for continued growth. The country aims to expand its core AI industry to over \$140 billion by 2030 and boost related sectors to \$1.4 trillion across the same period⁵.
- Decades of policy support and technology investment in China have created a strong foundation for further AI advancement. China operates the world's largest electrical grid⁶, accounts for 26% of the world's computing power and is home to 47% of the world's top AI researchers⁵.

China E-Commerce & Internet Growth Potential:

- China has a large middle class population of over 500 million people⁷ which represents a sizeable market opportunity for the companies held in KWEB. China's internet population reached 1.13 billion people in 2024. With a penetration rate of only 80% (compared to 93% in the US), there is significant potential for user growth⁸.
- Online shopping accounted for 26% of retail purchases and retail web sales totaled \$2.2 trillion in China in 2025 (compared to \$1.3 trillion in the United States)⁷.
- Data generated from E-Commerce and internet services provides the companies held in KWEB with the proprietary, high-volume datasets necessary to train increasingly complex AI models, which further bolsters Chinese AI development. China's annual data volume grew at a compound annual growth rate (CAGR) of 26% from 2022 to 2026, ranking first in the world⁵.

Carefully consider the Funds' investment objectives, risk factors, charges and expenses before investing. This and additional information can be found in the Funds' full and summary prospectus, which may be obtained by visiting kraneshares.com/etf/kweb. Read the prospectus carefully before investing.

Risk Disclosures:

Investing involves risk, including possible loss of principal. There can be no assurance that a Fund will achieve its stated objectives.

A-Shares are issued by companies in mainland China and traded on local exchanges. They are available to domestic and certain foreign investors, including QFIs and those participating in Stock Connect Programs like Shanghai-Hong Kong and Shenzhen-Hong Kong. Foreign investments in A-Shares face various regulations and restrictions, including limits on asset repatriation. A-Shares may experience frequent trading halts and illiquidity, which can lead to volatility in the Fund's share price and increased trading halt risks. The Chinese economy is an emerging market, vulnerable to domestic and regional economic and political changes, often showing more volatility than developed markets. Companies face risks from potential government interventions, and the export-driven economy is sensitive to downturns in key trading partners, impacting the Fund. U.S.-China tensions raise concerns over tariffs and trade restrictions, which could harm China's exports and the Fund. China's regulatory standards are less stringent than in the U.S., resulting in limited information about issuers. Tax laws are unclear and subject to change, potentially impacting the Fund and leading to unexpected liabilities for foreign investors. Fluctuations in currency of foreign countries may have an adverse effect to domestic currency values.

The Fund may invest in derivatives, which are often more volatile than other investments and may magnify the Fund's gains or losses. A derivative (i.e., futures/forward contracts, swaps, and options) is a contract that derives its value from the performance of an underlying asset. The primary risk of derivatives is that changes in the asset's market value and the derivative may not be proportionate, and some derivatives can have the potential for unlimited losses. Derivatives are also subject to liquidity and counterparty risk. The Fund is subject to liquidity risk, meaning that certain investments may become difficult to purchase or sell at a reasonable time and price. If a transaction for these securities is large, it may not be possible to initiate, which may cause the Fund to suffer losses. Counterparty risk is the risk of loss in the event that the counterparty to an agreement fails to make required payments or otherwise comply with the terms of the derivative.

The Fund may invest in Initial Public Offerings (IPOs). Securities issued in IPOs have no trading history, and information about the companies may be available for very limited periods. In addition, the prices of securities sold in IPOs may be highly volatile. In addition, as the Fund increases in size, the impact of IPOs on the Fund's performance will generally decrease. Narrowly focused investments typically exhibit higher volatility. The Fund's assets are expected to be concentrated in a sector, industry, market, or group of concentrations to the extent that the Underlying Index has such concentrations. The securities or futures in that concentration could react similarly to market developments. Thus, the Fund is subject to loss due to adverse occurrences that affect that concentration. In addition to the normal risks associated with investing, investments in smaller companies typically exhibit higher volatility. KWEB is non-diversified.

ETF shares are bought and sold on an exchange at market price (not NAV) and are not individually redeemed from the Fund. However, shares may be redeemed at NAV directly by certain authorized broker-dealers (Authorized Participants) in very large creation/redemption units. The returns shown do not represent the returns you would receive if you traded shares at other times. Shares may trade at a premium or discount to their NAV in the secondary market. Brokerage commissions will reduce returns. Beginning 12/23/2020, market price returns are based on the official closing price of an ETF share or, if the official closing price isn't available, the midpoint between the national best bid and national best offer ("NBBO") as of the time the ETF calculates the current NAV per share. Prior to that date, market price returns were based on the midpoint between the Bid and Ask price. NAVs are calculated using prices as of 4:00 PM Eastern Time.

The KraneShares ETFs and KFA Funds ETFs are distributed by SEI Investments Distribution Company (SIDCO), 1 Freedom Valley Drive, Oaks, PA 19456, which is not affiliated with Krane Funds Advisors, LLC, the Investment Adviser for the Funds, or any sub-advisers for the Funds.
